

My name is klaus, i'm currently 20 years old. I am the second child of three siblings, my older brother is 5 years above me while my brother is 2 years below me. Currently i'm still studying at UNIKA SOEGIJAPRANATA majoring in informatics engineering. I'm currently in semester 4, while my older brother has graduated from university. My older brother also studying UNIKA SOEGIJAPRANATA, but he is in a different major with me because he was forced to become an architect like my father. While my brother is still studying in high school at SMAN 11 Semarang.

I've had the talent to play music since I was in elementary school. I can play drums and guitar, since elementary school I have been in a school band. I remember performing two songs at the opening of a book fair. My music career did not stop there, when I was in junior high school I had participated in a band competition between baptist churches in Semarang when I was 13 years old. In high school, I also joined the school band activities. My valuable experience while participating in a student band competition in Semarang held in the mayor's office. I also want to enter the band community in UNIKA.

I am a person who is communicative towards people, wants it to be new or old. And I really like kids. Even in the past, I used to want to be a Sunday school teacher because I love children so much. Even in today's community, my next door neighbors have children always playing to my house. It can be said that I like to entertain little children like clowns.

Van Deventer-Maas Indonesia It is a foundation that helps Indonesian students. The objective of the Foundation is the promotion of the spiritual, intellectual, and material welfare of the Indonesian people with specific attention to education. Based on the research I am looking for, vdmi will provide cost assistance to students who get good grades and behave well to the community.

From childhood, I was like a bad boy who often gets reprimands from teachers. My parents often complained by the teacher that their child was very recalcitrant. I was told by some of my teachers that I was a student who was entered into a class increase meeting by the teacher, but at that time the teacher saw the grade side of my grades was good enough that I was considered for class stay. My parents were a little disappointed because every time my teacher picked up a complaint I was always the same who said that I was a chatty child where my teacher explained I often asked my countrymen.

As time went on I realized that the higher the level of education the more expensive the costs that need to be incurred. I want to help my parents by getting high grades. Because my parents told me that if I could go to college, I had to get a scholarship. My brother also wants to go to university so I try my best to be proud of what my parents want. During the graduation

holidays yesterday I could only help my parents sell clothes to find my tuition surcharge. Go on sale from afternoon to evening every day and morning to sell chicken noodles and I usually do part-time work like keeping shops and motorcycle taxis online.

I want to start at this university, I want my future to be better than my parents. I want to work hard through the knowledge I have gained and the talent God has given me. I also thank God for having a partner who supports me to achieve my life.

After I got the VDMI scholarship, I thought that later someone would enter savings, for my parents and my emergency fund. I also want to turn the money around for the business I want to raise, my mother's noodles. Multiplying my bandung noodle outlet is a noble goal for me to repay the kindness of my parents during this time.
